McCULLOCH QUALITY PLUS BARS FOR LONGER WEAR - FASTER CUTTING

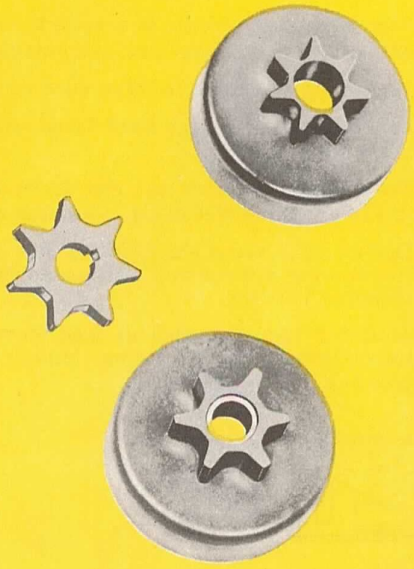

No matter whether you use your chain saw only occasionally or everyday for a living, you will profit by using a genuine McCulloch cutter bar.

Every McCulloch bar, regardless of type or price, has been manufactured to give you maximum wear and to make your cutting job easier.

- McCulloch bars undergo an exclusive four stage hardening process, resulting in a bar that will withstand the hardest use.
- Only the finest high carbon steel is selected.
- McCulloch's exclusive bar contour, plus precise bar thickness and groove depth mean exact chain fit and support for longer chain and bar life.
- Wide choice of solid, welded or special purpose bars.
- All bars are guaranteed and fully backed by McCulloch.

See your McCulloch dealer for the McCulloch bars that are precision built to last longer — you won't find a better bar at any price.

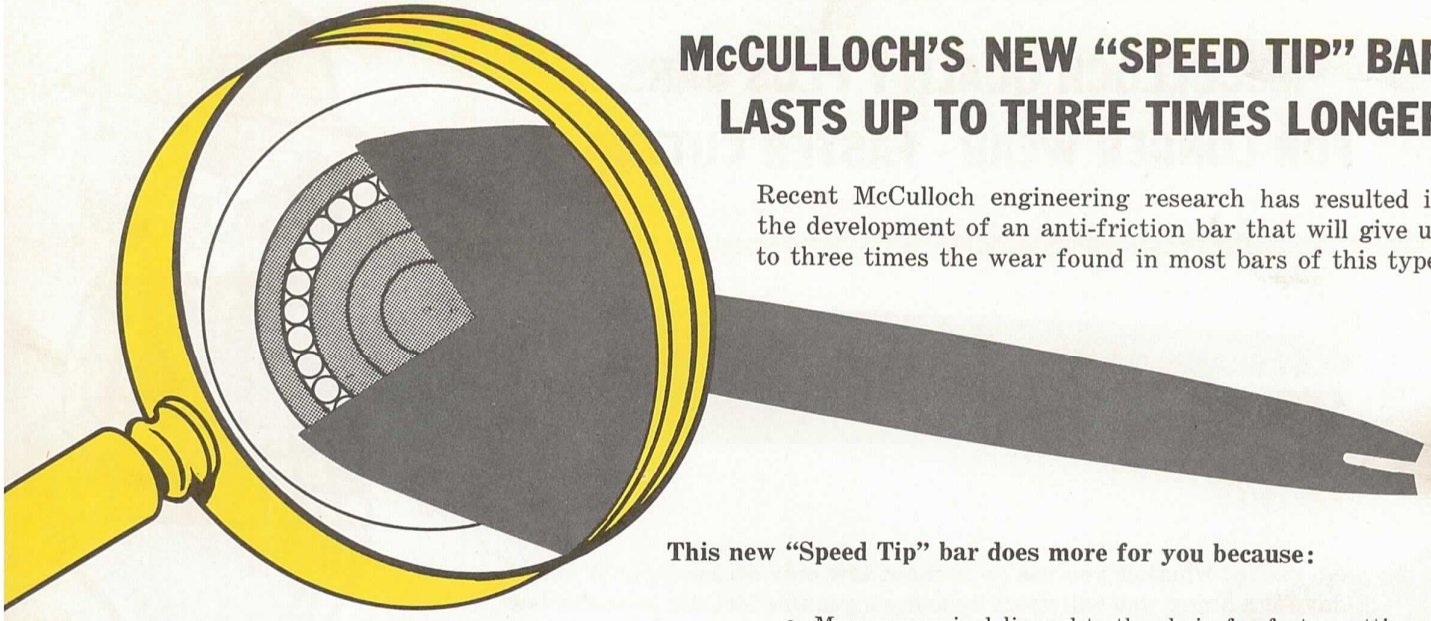

McCULLOCH CARBURIZED SPROCKETS LONGER WEARING—FASTER CUTTING

McCulloch sprockets have been designed for perfect chain match meaning longer chain life, less chance of chain jumping and more power applied to your cutting job.

All McCulloch sprockets undergo a special carbon inducing process that results in a sprocket that can't be matched for resistance to wear and chipping. Don't take a chance on using a worn or mis-matched sprocket with a new chain.

Insist on a genuine McCulloch sprocket, there's one for every type of Pintail chain.

McCULLOCH'S NEW "SPEED TIP" BAR LASTS UP TO THREE TIMES LONGER

Recent McCulloch engineering research has resulted in the development of an anti-friction bar that will give up to three times the wear found in most bars of this type.

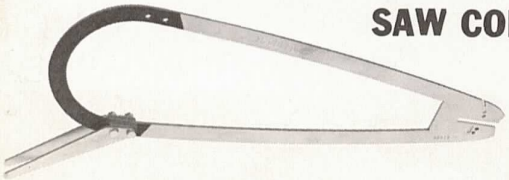

McCulloch's new "Speed Tip" has been built to last, its exclusive one piece tapered side plates securely hold the roller bearing in place, eliminating the principal cause of failure found in many bars of this type.

If you want faster cutting with longer engine and chain life you want a new McCulloch "Speed Tip". See it now at your McCulloch dealers.

This new "Speed Tip" bar does more for you because:

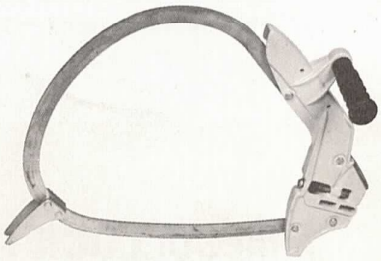

- More power is delivered to the chain for faster cutting.
- Less friction at the bar nose area means longer chain life and better performance.
- Chain can be run tighter on a "Speed Tip" without increased chain wear — minimizing chain jumping problems.
- "Speed Tip's" narrower bar is lighter and reduces binding.
- Chain runs cooler because chain oil will not burn off.
- "Speed Tip" is replaceable.

McCULLOCH PADDLE BOW FOR EASIER HANDLING POSITIVE SAW CONTROL

- New McCulloch Paddle Bow is 26% lighter than standard 24" bar for easier handling and cutting.
- Less chain wear due to large nose radius.
- Longer bar life — large hard faced nose area design minimizes wear.
- No pinching — entire cut can be made without binding due to exclusive McCulloch nose area taper.
- Double spike keeps chain out of dirt and facilitates effective feeding and control — allows operator to plunge cut in standing position.
- Ideal for fast and efficient land clearing, brush cutting, tree trimming, pulp cutting, bumping knots, Christmas tree cutting, line clearing.

NOW GROUND LEVEL CUTTING WITH McCULLOCH PLUNGE BOW

- Cuts at ground level quickly and easily for greater production — minimum waste.
- Plunge Bow minimizes stopping and bending in felling and bucking operations — is balanced for ease of operation.
- Special taper makes possible straight through cutting without pinching or binding.
- Lightweight bar construction makes saw easier to handle, yet bar is designed for rugged duty.
- Plunge Bow is easily detached for straight bar operation.
