# SERVICE BULLETIN # 1003

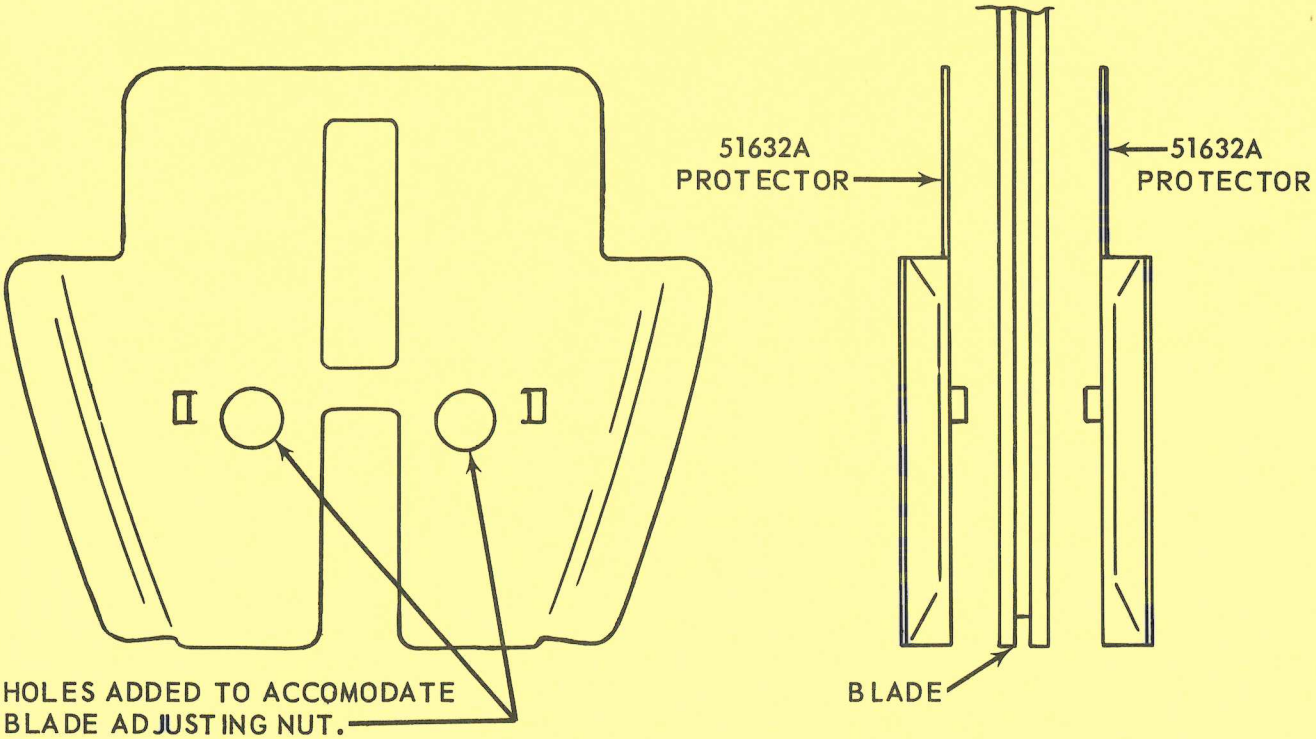

SUBJECT ~~Gear Case Protector~~

~~Use of two (2) instead of one (1)~~

MODEL 55 DATE 9-20-57

Beginning with serial number 6000, Model 55 Chain Saw engines shipped from the factory are equipped with two (2) gear case protectors, part number 51632A. The protectors, which have been redesigned to accommodate the lockplate adjusting nut, should be installed on both sides of the blade. (See Illustration.)

By installing the protectors in this manner, chain oil is retained within the blade grove, thus insuring a controlled flow of oil to the chain.

Two gear case protectors can be utilized on early Model 55 Chain Saw engines, providing the protector installed on the outer side of the blade is the new style, part number 51632A.
