McCULLOCH

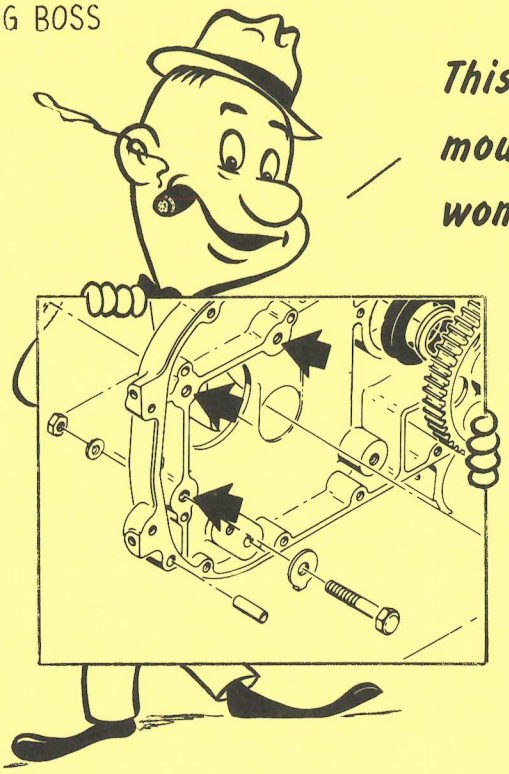

SERVICE BULLETIN # 1089

SUBJECT **GEARCASE MOUNTING WASHERS**

MODEL **1-60, 1-80** DATE 3/30/60

When repairing Model 1-60 and 1-80 transmission assemblies, add a flat washer, P/N 100311, under each lockplate on the three gearcase mounting bosses. This will prevent the gearcase mounting screws from crushing the bosses.

This shows the location of the mounting bosses. Your customers won't mind the cost of the three additional washers when you point out the advantages of preventive maintenance.
