SUBJECT: BRACKET KIT SCREWS, IGNITION SWITCH

CP 55, CP 70 - Bracket Kit Screws

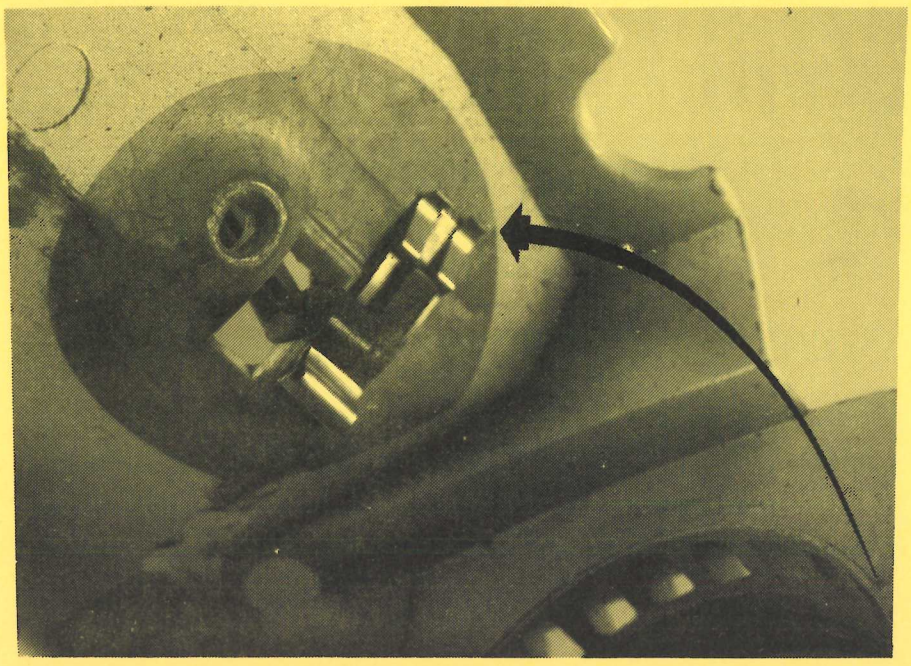

Bracket Kit, P/N 83204, is used for attaching the air cleaner cover on MAC 10 Series, G 70, CP 55 and CP 70 saws. The kit includes two Screws, P/N 103357 for attaching the carburetor on the MAC 10 and G 70 saws, but these screws cannot be used on the CP models and must be discarded when the bracket is installed.

Kit screws are too long for use on the CP models and can distort the port boot under the fuel tank and cause air leaks. Refer to the appropriate illustrated parts list for the screws and washers required for carburetor and bracket installation on CP 55 and CP 70 saws.

Mini-Mac 6 - Ignition Switch

On some units of the Mini-Mac 6 (manual models) in the serial number range of 28015 to 30000, it has been noted that the ignition switch will not remain in the "on" or run position. The reason for this condition is that there is interference between the switch contact and the fuel tank when the button is pushed to the "on" position.

The problem may be eliminated by bending the forward tips of the contact down flat against the fan housing. See illustration below.
