MODEL: Power Mac 6, 6A

October 16, 1972

SUBJECT: STOP SWITCH WIRE ASSEMBLY

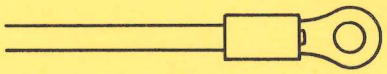

The switch end of the PM6 and PM6A stop switch wire assembly has been changed from a two-piece tab terminal to a simple closed end loop terminal as illustrated below:

OLD

P/N 69879, Terminal
P/N 69344, Wire and connector

NEW

P/N 88435, Wire and connector

This change prevents the switch wire from being pulled off during operation of the saw when sawdust and debris restricts the movement of the wire. When this happens, the engine cannot be shut off.

The length of the wire has been reduced from 4 1/2 in. to 3 3/4 in.

This change is effective on PM6 Model 600085U, Serial No. 13-10751. On the PM6A the change is effective on Model 600086U, Serial No. 12-59106 and after.
