MODEL: All Mini Mac Chain Saws March 23, 1973

SUBJECT: FUEL HOSE INSTALLATION

To insure proper seating of the Mini Mac fuel hose to the fuel tank, a small amount of grease may be applied to the fuel hose guide ribs in the bottom of the fan housing. This will allow the hose to slide into position against the ribs and prevent kinking when the fuel tank is installed.

If there is evidence of fuel starvation, loss of power, lean running condition, or erratic carburetion, a kinked fuel hose may be the problem. To make sure the hose is properly seated, tug on the fuel tank before the front cover is installed and feel the resistance of the hose. Install the front cover.

Look inside the access hose in the bottom of the fan housing and see if the hose is straight. Insert a screwdriver and push the hose forward into the tank.
