MODEL: All Mini-Mac Chain Saws June 18, 1973

SUBJECT: IMPROVED FUEL HOSE

A fuel hose expander tube, P/N 89789, is now being included in Mini-Mac fuel hoses, P/N 83904, for improved sealing and fuel flow.

Installation of the new hose may be aided by using a fork, modified by removing the first and third tines (See Figure 1). To install the fuel/oil tank onto this hose:

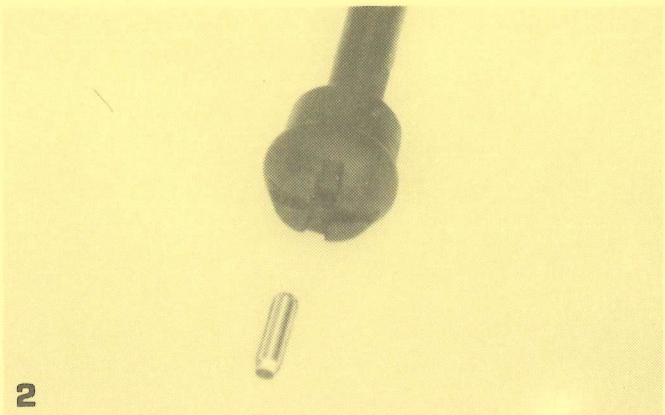

1. Grease the lip of the large end of the fuel hose.

1

2. Insert the fork into the access hole in the bottom of the fan housing, straddling the fuel hose with the two tines. (NOTE: With earlier fan housing, the access hole must be enlarged with an 1/8 in. chain file.)

3. Install the tank, using the fork to support and straighten the fuel hose as it enters the tank. Inspect the hose through the access hole to make sure it is straight and fully seated.

To update present stock of fuel hoses, the expander tube, P/N 89789, may be ordered. To install the expander tube, push it into the large end of the hose until flush. (NOTE: For best results, install the expander tube into a NEW service fuel hose which has not been exposed to fuel.)
