SUBJECT: Fuel Cap Venting With All Weather Cover

When the all weather fuel cap Cover, P/N 83651, is used on Fuel Cap, P/N 55934B, the cover may fit so tightly against the top of the cap that it will not vent.

To be sure that there will be proper venting when the cover is used, just file a couple of shallow grooves across the face of the cap as illustrated. Do not file into the filter.

Only a very shallow groove for air passage is needed and a small rat-tail chain file (1/8" or 3/16") is suitable.
