McCULLOCH SERVICE BULLETIN

NO. 1693

MODEL Pro Mac 600 Series DATE October 1, 1979

SUBJECT Air Filter, P/N 95215

In an effort to improve the alignment characteristics of the 610/650 air filter, the air filter has been modified to incorporated four positive positioning posts (Figure 1).

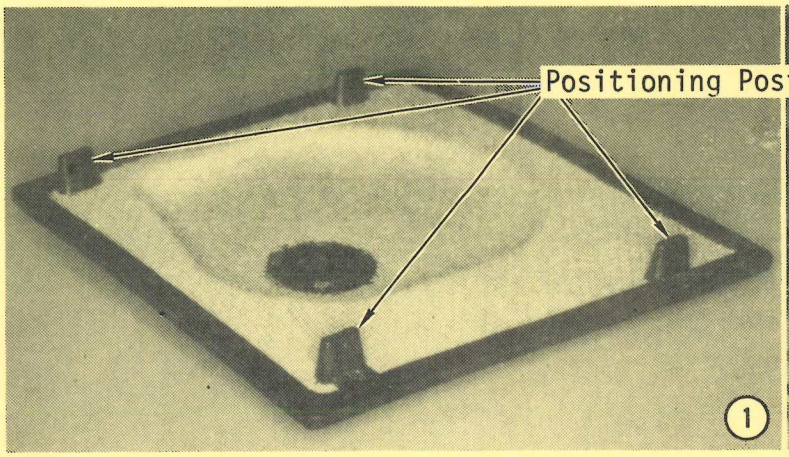

The improved Air Filter, P/N 95213, is installed on all current production 610/650 chain saws, and is available as a service part.

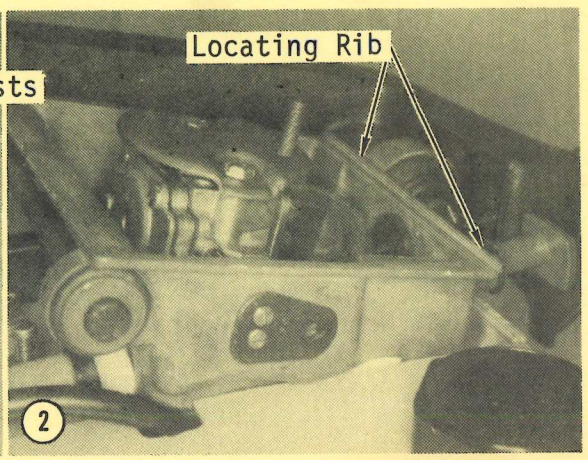

Because the new filter has the positive positioning posts, the locating rib (Figure 2) incorporated in early production Air Box, P/N 91920, has been removed. The modified (new) air box is available as a Kit, P/N 95215, which includes Air Filter, P/N 95213. The new Air Box, P/N 95215, replaces Air Box, P/N 91920.

The positive positioning posts have also been incorporated on Felt Air Filter, P/N 95218. Filter, P/N 95218, is the alternate filter that is designed for use when chain saw is operated under excessively abrasive conditions.

All skin packed Air Filters, P/N 92055, shipped as of 6/25/79, will contain Air Filter, P/N 91920 (Figure 2).

Part Number	Description	Mfg. Suggested List Price	Stock Code
